Using C++ Modules

Modified March 21, 2024

Modules is a relatively recent C++ feature (C++20) and the way to present modules to the compiler and linker unfortunately varies.

Please contact me if you have more useful information.

Microsoft C++

When using Visual Studio.

- Module files are suffixed .ixx
- Set the propeties of your project. Tab: Project -> Hello project.
 - General properties: Set "C++ language standard" to "latest"
 - o C/C++ general: Scan for additional module dependencies: "yes"

GCC

CGG uses .cxx for module files Use -fmodules to use modules.

Clang

Clang uses .cppm for module files. Use -fmodules to use modules.
